Ordinary Least Squares (OLS)

(27th Aug 2024 - 18th Oct 2024)

Ordinary Least Squares (OLS) operates by minimizing the total sum of the squared deviations between the observed values of the dependent variable in the provided dataset and the values predicted by the linear function.

Let's continue exploring OLS by converting a real data set into mathematical notation, then working to solve a linear relationship between features and a variable!

OLS Equations

Mastering Machine Learning with Python

■ $y = mx + b$

- m is slope
- b is intercept with y -axis

Mastering Machine Learning with Python

(27th Aug 2024 - 18th Oct 2024)

We can see for $y=mx+b$
there is only room for one possible feature x .
OLS will allow us to directly solve for m and b .

Linear Regression enables us to establish a connection between multiple features in order to estimate a desired output.
